LID GAUGE

IMPORTANT - CHECK PRINTER SCALING

To ensure this page has been printed to the correct scale measure the width of this box

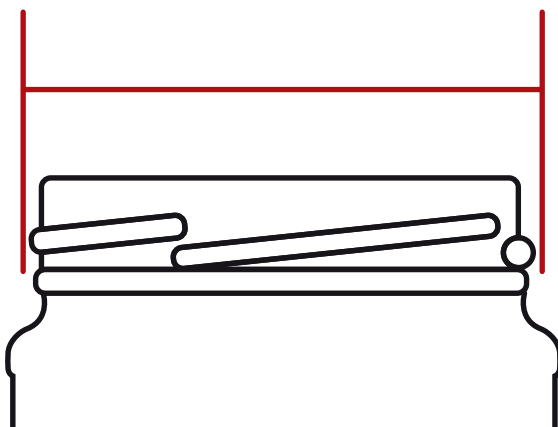

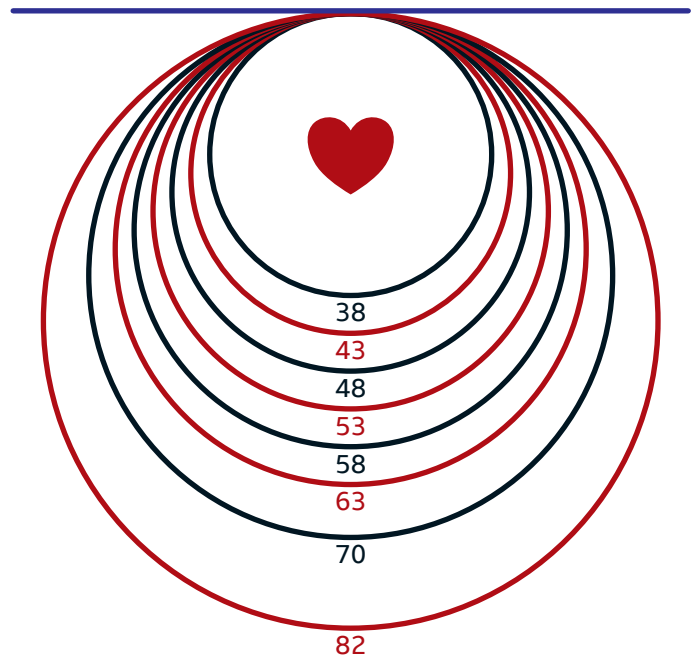

Place jar up-side-down on lid gauge

Align the outside of the thread with the blue line

Read off the size from where the outside of the thread matches the opposite side of the circle.

If your jar does not match a size it will be custom made for a product and we will not be able to obtain a suitable lid. Re-cycling will ensure your old jars will have a new life as new jars due to efficient management by the UK glass industry.

You can measure the outside of the thread of the jar, bearing in mind a lid is a loose fit. So for example a jar that takes a 63mm lid will typically be just under that, ie: 61 - 62mm
